ABOUT ME

I'm an MCA student and full-stack developer who loves building web apps with the MERN stack. I have a solid grip on C++, Python, and data structures, and I enjoy experimenting with AI integrations. I'm currently looking for a software engineering role where I can put my coding skills to work on real-world projects.

EDUCATION

MASTER OF COMPUTER APPLICATIONS, CGPA 8.16 2025-2027
Maharaja Sayajirao University of Baroda

BACHELOR OF COMPUTER APPLICATIONS, CGPA 8.98 2022-2025
Maharaja Sayajirao University of Baroda

SKILLS

- C++
- Python
- Java
- React.js
- Node.js
- FastAPI
- MongoDB
- SQL
- Data Structures

PROJECTS

AI Document Analyzer

- **Tech Stack**: Python (FastAPI), Pinecone (Vector DB)
- Built a tool using Python and FastAPI that lets users upload PDFs and ask questions about the text.
- Used Pinecone to perform semantic search, which gave me a solid understanding of how APIs process and return data to users.

Seat Booking System

- **Tech Stack**: MERN Stack, Socket.io, Redis
- Created a live reservation platform using React and Node.js.
- Used Socket.io and Redis to make sure two people couldn't book the exact same seat at the same time, teaching me how to handle concurrent user actions and edge cases.

AMS Website (E-Commerce)

- **Tech Stack**: MERN Stack
- Made an e-commerce site where users can browse parts and build a custom PC.
- Handled the logic for a persistent shopping cart and made sure the UI worked smoothly and correctly on different screen sizes.
